But for $\beta = \alpha + 1$, the series becomes

$$\frac{\alpha}{\alpha+1} + \frac{1+\alpha}{2+\alpha} + \frac{1+\alpha}{3+\alpha} + \dots = \sum \frac{1+\alpha}{n+\alpha}$$

which diverges, by comparison with $\sum 1/n$.

Example 13. Show that the series

$$\sum \frac{3 \cdot 6 \cdot 9 \dots 3n}{7 \cdot 10 \cdot 13 \dots (3n+4)} x^n, \quad x > 0$$

Chapter IV: Taxonomy of Microbes

Classification is a means of bringing order to the bewildering variety of organisms in nature. Once we learn the characteristics of an organism we can compare it with other organisms to discover similarities and differences. The human mind tends to arrange similar things together in groups and to distinguish these groups from one another. In order to identify and classify microorganisms, we must first learn their characteristics. It is usually not feasible to study the characteristics of a single microorganism. Because of its small size, therefore, we study the characteristics of a culture: a population of microorganisms (usually millions or billions of cells of only one kind). It is as if we are studying the characteristics of a single organism. As stated earlier, a culture that consists of a single kind of microorganisms (pure living organism).

Chapter II: Historical Developments in Microbiology

"History is a systematic record of past events as they relate to a person, a period, a century or particular group of people"
History of microbiology is filled with thrilling achievements. Microbiology began when people learned to grind lenses from pieces of glass & combined them to produce magnifications great enough to see microbes.
